

NW6160 ONE-SIDED LATCH

SCAN FOR MORE
INFORMATION

INSTALLATION

1. The one-sided latch is designed to fit both right-hand and left-hand applications. To conform to your application, simply reverse the latch bars (position lockable latch bar at top arm pad) and latch bracket with provided hardware (Fig. 2). Before installing latch, make sure fence post is vertical and firmly anchored. First, attach latch bracket to fence post at desired height (hand level recommended).
2. Before installing the keeper, be aware of gate sagging. With gate in closed position, attach keeper to gate so that keeper bar is centered between arm pads of latch bracket (Fig. 1). If necessary, use keeper bracket as a template, mark all center points and drill pilot holes for easy installation; otherwise, fasten with mounting screws provided.
